Education

Bachelor Of Software Engineering

2022 – Present

Kocaeli University

- GPA: 3.65/4
- Software Technologies Research Laboratory(Star-Lab) Team Member

Professional Experience

Software Development Engineer

09/2025 – Present

Vericom Teknoloji A.Ş.

- Developed, maintained, and enhanced web and mobile applications using React and React Native.
- Improved application performance and user experience through optimization, debugging, and feature enhancements.
- Designed and managed database tables, relational structures, and automated backend tasks (cron jobs) using Supabase.
- Managed build and deployment processes for web applications in production environments (IIS).
- Oversaw mobile application release cycles, including build generation, submission, publishing, and updates on App Store, Google Play Store, and App Gallery.

Back-End Developer Intern

08/2025 – 09/2025

RasyoLife Hayvan Besleme ve Sağlığı A.Ş.

Full-Stack Developer Intern

07/2025 – 08/2025

Vericom Teknoloji A.Ş.

Projects

Department Management System

2025

Developed a web-based Department Management System that enables academic staff to manage internal operations efficiently. The system supports creating and viewing course schedules, assigning courses to classrooms, generating exam timetables, and designing seating arrangements for exams.

Technologies Used:

- **Front-End:** React.js
- **Back-End:** Java, Spring Boot, Spring Cloud(Netflix-Eureka, Gateway, OpenFeign), JAXRS, JWT
- **Database:** PostgreSQL, MySQL, MongoDB

The back-end, built with Java Spring and JAX-RS, follows a microservices architecture for better scalability and modularity. JWT ensures API security by validating tokens at the gateway level.

Activity Planning System

2025

This project enables users to create activities, view them on a map, and indicate participation. Built with a microservices architecture, it ensures scalability and separation of concerns between components.

Technologies Used:

- **Front-End:** Swift
- **Back-End:** Java, Spring Framework, JWT
- **Database:** PostgreSQL

The front-end, developed in Swift, supports Turkish and English localization. It utilizes MapKit for maps, Security for Keychain, and Combine for asynchronous operations.

File Repository Backup System [↗](#)

2025

This project provides a system for users to upload and share files securely while ensuring data integrity. Threading is used to enhance functionality, including anomaly detection through log analysis, tracking file changes via timestamps, and file backup to prevent data loss.

Technologies Used:

- **Front-End:** React
- **Back-End:** Java, Spring Framework, Log4j, JWT, PostgreSQL

Treepedia: Deep Learning-Based Plant Disease Diagnosis and Mapping

2024

This project, built with the Django framework, utilizes documents and booklets published by the General Directorate of Forestry and the Ministry of Agriculture and Forestry of Turkey and image dataset from [kaggle.com](#) [↗](#). It focuses on mapping trees across Turkey, identifying plant diseases through leaf classification algorithms, providing recommendations for diagnosed diseases, and mapping plant diseases nationwide based on user-submitted data.

Skills

Java

OOP, Spring Web, Spring Cloud, Spring Security

JavaScript

React.js, React Native, NodeJS

C#

OOP, .NET Core, Entity Framework

Data

MSSQL, PostgreSQL, MySQL, MongoDB

Go

Chi, Gorilla WebSocket
